

THE WORLD OVER

BARTENDERS OUT ON STRIKE

When bartenders and waiters at Drumheller's three hotels walked out on strike at six o'clock Saturday night, Drumheller's thirsty citizens found themselves faced with a drink-free zone.

The strike, planned originally for July 1st, but delayed until Saturday, came as a surprise to hotel owners, who, although given five days' notice that their employees would walk out unless their demands were met, had, together with an increase of \$7.50 a week, were under the impression that the threat would not be put into effect.

Government By Commission

It is not perhaps surprising that organizations and individuals are inclined to look askance at what has been termed the "rising tide of bureaucracy" as represented in the growing tendency to hand over the reins of government and administration to a group of experts and administrators.

That there is a growing trend in this direction, both in the Federal and provincial areas in Canada cannot be gainsaid. The evidence is palpable. One only has to look around and enumerate, for proof that a multiplicity of boards and commissions are at work performing, in some cases the functions of governments, and in others, the duties formerly delegated to the crown. And the tendency is towards increased growth of administration in this form.

Apart from the question of expediency, there are, of course, arguments advanced in support of administrative government. There are, for instance, the economies of scale which are not without foundation. For instance, it is urged with a good deal of truth that demands by the people upon their governments for extension of existing services and new services is increasing all the more, and that these services can be rendered with greater expedition and more efficiency by boards set up for the purpose by the government departments.

The argument cannot but well be refuted, but the question which the people have to face is whether or not they are willing to surrender a good many privileges, such as the principle of governmental responsibility to the electorate, the right of appeal against decisions, the right to know what is going on, the right to inspect government premises, etc.

That these privileges—indeed, the very rights which are impaired and threatened in an increasing degree with the multiplication of administrative boards and commissions—was recognized at the recent convention of the Law Society of Saskatchewan, when a delegation approached a research report committee of the province's legal profession for the information by which it could be assured that the committee continue its work and further, proposed a resolution that a program of education which would bring the facts and the problem to the attention of the public be conducted.

One of the chief objections to commission form of administration is the tendency to render political power and influence in organizations which are not directly responsible to the electorate and very often there is no appeal to the courts from the dictates and rulings of these bodies. In other words, the individual, deprived of recourse to the courts in which he has every right to demand justice, is compelled to seek redress through the channel of his individual lawyer, if that exists.

Another objection, and this was stressed by the Law Society committee, is the fact that these appointed tribunals frequently conduct their hearings in secrecy, with press and public excluded, and coupled with that is the fact that reasons for decisions are not usually given. Under these circumstances it is to be understood that the committee decided that "the compensation received of the hearings tends to destroy confidence."

When rulings and decisions, binding upon the public, are given behind closed doors and without any accompanying reason therefore, it is to be expected that the public will turn to tribunals in their quest on their work in this manner until it may be stopped.

On the other hand, it may well be pointed out that frequently enough the wheels of justice operating through the established channels of the law courts travel slowly and, to the layman, it appears that the processes involved often entailed unnecessary expense, the result being of stagnation and the necessity of time-worn methods, heralded by a good deal of red tape.

Now one in this country would wish to support the informality, sometimes bordering on indignity, which marks the administration of justice in some of the courts on the other side of the international boundary, but if measures can be adopted here which would simplify procedure and reduce its costliness without robbing the courts and legal procedure of the dignity and respect in which they are properly held, they would be generally welcomed.

It is to the credit of the barristers attending the Saskatchewan convention that they are prepared to give this phase of the general question their undivided attention. The very fact that lawyers themselves recognize the advisability of modifying procedure and reducing expenses to suit present day circumstances is encouraging.

Relief Frauds

A Little Bit Of Reason Is Necessary In All Things

There are still thousands of deserving people on relief. It would also look as if there are still some others who are imposing on the taxpayers. A case in point, however, in the latter category was revealed in police court. A Toronto resident was sentenced to seven days in jail and fined \$20 or 30 days hard labour for driving his car on a reckless driving charge. An additional fine of \$10 or 10 days was imposed on him for failing to return to the scene of an accident in which another driver had been damaged to the extent of \$36.

The evidence was that the accused had been drinking. His counsel stated that he is not working and is on relief.

What those who are paying the relief bills will want to know is how it is that a relief recipient has the money to own and drive a car, buy a driver's license and pay a license fee and buy whiskey if he is really an indigent—Toronto Telegram.

Luck Ran In Threes

Guelph Couple Travel In Prize Car With Prize Money

Mr. and Mrs. Lyle O'Neill of Guelph, Ontario, went to the Martini in a new car on their honeymoon, the cost of which came about because luck evidently runs in threes for the grooms.

A graduate of Ontario Agricultural College, O'Neill won a car in a contest, and before the wedding day, he won a \$1,000 cheque in a horse-moon contest.

Then came a bit of bad luck when the new car was damaged when it was hit by a truck while it was parked on a Guelph street. This was nullified quickly, however, by a third bit of good luck when the insurance company gave O'Neill another new car to replace the damaged machine.

For Green Pastures

Much Attention Being Devoted The World Over To Grassland

Although during the present generation, wheat has held the stage in the public eye as the most spectacular agricultural crop, there is a much darker and more sombre crop on which agriculture itself was founded—the dawn of civilization. This is the grassland or pasture crop. For many years, it was relegated to the background, but scientific agricultural science came to its aid in adding much to human knowledge (and profit) to the farmer in relation to grassland, its creation, management and fertilization.

Never before has there been so much interest all over the world in grassland problems, or so much attention devoted to research work and the use of pastures to improve the different forms of grasses and legumes, the nutritive value of the various forage crops in livestock feeding, the improvement of grassland for use of fertilizers, pasture management, and the study of the best seed mixtures for hay and pasture purposes.

Recently scientists of the Canadian Department of Agriculture, together with those of the various agricultural colleges, held a two-day session of the Dominion-Provincial Pasture Conference at Central Experimental Farm, Ottawa, where the main phases of cultivation and utilization of pasture lands were discussed, and recommendations were made for agricultural scientists to assemble for the tenth World's Fourth International Grassland Conference at the Welsh Plant Breeding Station at Aberystwyth, Wales, chosen because the work actually done there is the best known.

One of the chief objections to commission form of administration is the tendency to render political power and influence in organizations which are not directly responsible to the electorate and very often there is no appeal to the courts from the dictates and rulings of these bodies. In other words, the individual, deprived of recourse to the courts in which he has every right to demand justice, is compelled to seek redress through the channel of his individual lawyer, if that exists.

Under these circumstances it is to be understood that the committee decided that "the compensation received of the hearings tends to destroy confidence."

When rulings and decisions, binding upon the public, are given behind closed doors and without any accompanying reason therefore, it is to be expected that the public will turn to tribunals in their quest on their work in this manner until it may be stopped.

On the other hand, it may well be pointed out that frequently enough the wheels of justice operating through the established channels of the law courts travel slowly and, to the layman, it appears that the processes involved often entailed unnecessary expense, the result being of stagnation and the necessity of time-worn methods, heralded by a good deal of red tape.

Now one in this country would wish to support the informality, sometimes bordering on indignity, which marks the administration of justice in some of the courts on the other side of the international boundary, but if measures can be adopted here which would simplify procedure and reduce its costliness without robbing the courts and legal procedure of the dignity and respect in which they are properly held, they would be generally welcomed.

It is to the credit of the barristers attending the Saskatchewan convention that they are prepared to give this phase of the general question their undivided attention. The very fact that lawyers themselves recognize the advisability of modifying procedure and reducing expenses to suit present day circumstances is encouraging.

Social Reform Legislation

Farmers' Creditors Arrangement Act Brings Farmers Relief In Farm Crisis

Operations of the Farmers' Creditors Arrangement Act, one of the most remarkable statutes passed by the British government, came into effect in the latter category was revealed in police court. A Toronto resident was sentenced to seven days in jail and fined \$20 or 30 days hard labour for driving his car on a reckless driving charge. An additional fine of \$10 or 10 days was imposed on him for failing to return to the scene of an accident in which another driver had been damaged to the extent of \$36.

The evidence was that the accused had been drinking. His counsel stated that he is not working and is on relief.

What those who are paying the relief bills will want to know is how it is that a relief recipient has the money to own and drive a car, buy a driver's license and pay a license fee and buy whiskey if he is really an indigent—Toronto Telegram.

Demonstration Was Success

German Musician Conducted Orchestra Over Long Distance Telephone

Long-Distance Telephone Pioneered

An orchestra over the phone has been demonstrated for the first time in Berlin by Dr. Erich Fischer, student of the Royal College of Zurich.

Fischer conducted from the Berlin Swiss legation, while the orchestra was miles away at the Musical High school of Berlin. The conductor and the orchestra were in separate rooms connected by telephone cable and every member of the orchestra supplied with earphones. Fischer conducted his orchestra by brief verbal directions, supported by a piano player.

The demonstration proved a perfect success. It will be repeated over longer distances in the near future.

How fast can your car go? is the usual question. It ought to be how safe do you drive.

For Green Pastures

Much Attention Being Devoted The World Over To Grassland

Although during the present generation, wheat has held the stage in the public eye as the most spectacular agricultural crop, there is a much darker and more sombre crop on which agriculture itself was founded—the dawn of civilization. This is the grassland or pasture crop. For many years, it was relegated to the background, but scientific agricultural science came to its aid in adding much to human knowledge (and profit) to the farmer in relation to grassland, its creation, management and fertilization.

Never before has there been so much interest all over the world in grassland problems, or so much attention devoted to research work and the use of pastures to improve the different forms of grasses and legumes, the nutritive value of the various forage crops in livestock feeding, the improvement of grassland for use of fertilizers, pasture management, and the study of the best seed mixtures for hay and pasture purposes.

Recently scientists of the Canadian Department of Agriculture, together with those of the various agricultural colleges, held a two-day session of the Dominion-Provincial Pasture Conference at Central Experimental Farm, Ottawa, where the main phases of cultivation and utilization of pasture lands were discussed, and recommendations were made for agricultural scientists to assemble for the tenth World's Fourth International Grassland Conference at the Welsh Plant Breeding Station at Aberystwyth, Wales, chosen because the work actually done there is the best known.

One of the chief objections to commission form of administration is the tendency to render political power and influence in organizations which are not directly responsible to the electorate and very often there is no appeal to the courts from the dictates and rulings of these bodies. In other words, the individual, deprived of recourse to the courts in which he has every right to demand justice, is compelled to seek redress through the channel of his individual lawyer, if that exists.

Another objection, and this was stressed by the Law Society committee, is the fact that these appointed tribunals frequently conduct their hearings in secrecy, with press and public excluded, and coupled with that is the fact that reasons for decisions are not usually given. Under these circumstances it is to be understood that the committee decided that "the compensation received of the hearings tends to destroy confidence."

When rulings and decisions, binding upon the public, are given behind closed doors and without any accompanying reason therefore, it is to be expected that the public will turn to tribunals in their quest on their work in this manner until it may be stopped.

On the other hand, it may well be pointed out that frequently enough the wheels of justice operating through the established channels of the law courts travel slowly and, to the layman, it appears that the processes involved often entailed unnecessary expense, the result being of stagnation and the necessity of time-worn methods, heralded by a good deal of red tape.

Now one in this country would wish to support the informality, sometimes bordering on indignity, which marks the administration of justice in some of the courts on the other side of the international boundary, but if measures can be adopted here which would simplify procedure and reduce its costliness without robbing the courts and legal procedure of the dignity and respect in which they are properly held, they would be generally welcomed.

Drouth Hits Mars

Astronomers See Signs Of Arid Conditions in Equatorial Area

The planet Mars is having a droughy winter than any in the midwest dust bowl, and the African Sahara.

The telescopists of the droughy winter report to the American Association for the Advancement of Science by two Mt. Wilson astronomers, Dr. Walter S. Adams and Theodore Dunham Jr.

The droughy winter was observed in the equatorial regions, the area where dark spots that astronomers suspect is vegetation, appear when the sun is

is vegetation. They conclude that the droughy winter is caused by the canals of Mars.

It is believed that by this report there is no doubt Martians use irrigation, if what astronomers see is vegetation.

Money Found By Boys

Small boys playing "bank" with point notes attracted the attention of Glasgow police. The boys had found the notes in a bank tin box in an abandoned house. Besides £350 in English notes, there was an amount of German and Dutch money. The English notes bore the dates of the Great War years.

Extension Of Program Period

Forecast In Antennae Period

Extension of the daily programme period to 12 and possibly to 16 hours in October when the new high power transmitters in Ontario, Quebec and British Columbia will go into action and into operation. The new stations companies in Montreal and Toronto, were some of the announcements made by Major Gladstone Murray, president of the Canadian Broadcasters' Association, following a meeting of regional directors and programme directors.

There is much to say for the Canadian theory. Suspenders may be ugly, wind bellies are neither attractive nor comfortable, but the weight of the breeches on the shoulders and not on the hips. The put a belt on them and not on the waist. The belt a man will wear, and he will always feel that his suspender has never supported his trousers with the same firmness as the belt.

Suspender went out when the suspension country life made men try to be better dressed and more comfortable. They began to buy belts and suspender belts and now Gene Tullman's certificate will give them another fillip. If a man cannot have two belts in his garage he can express himself by having suspenders for each and every pair of trousers—New York Sun.

There Is A Difference

People Can Buy But Not Hold At Soap Box Orators

You can soap box orators in streets of Wiltshire, Middlesex, England, but you cannot hold them there.

What is the difference? A police inspector explained: "Hoading is loud in volume, drowns the voice of the speaker, and can be heard by people living in the neighborhood for 100 yards." He added you could hear the orators' voices above boeing.

A seaplane can rise from slightly rough water more easily than from a calm surface.

Has World's Finest Service

Scotland Yard Set To Trace Fingerprints Within Five Minutes

Scotland Yard men will have the finest service of criminal records and fingerprints in the world when the extension of its building at Westminster is completed.

Young men, "Who Is Who In Crime?" will incorporate the latest mechanized system of card-indexing finger prints. At present the Yard's library contains 600,000 prints or more than 600,000 sets.

The appointment of Chief Inspector George Blackburn, of the West Riding Police, as "adviser for the development of new records," is a significant step forward to the police records of the country at the disposal of any force when needed.

The present fingerprint classification, which is based on the criminal record, a suspect can be produced within five minutes of the receipt of the prints. A similar system will be built up among provincial forces.

Will Yield Wealth

Treatment of old floor and wall material from the dismantled refinery section of the Royal Canadian Mounted Police station in Newmarket-on-the-Lake is expected to return hundred, perhaps thousands of dollars, it was learned. Gold and silver particles collected in the wall and floor material through past years will be recovered.
